The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There is no indication in these claims of how the misfire detection is implemented, i.e. on what basis is misfire judged or determined?

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2855

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 5 and 6 are rejected under 102(b) as being anticipated by Dietz et al.

Regarding claim 5, Dietz et al disclose a method for detecting combustion misfires comprising considering the position of angular segments relative to a reference point (TDC) of the movement of the piston of an engine 1 which are dependent upon an operating parameter of the engine (See Col. 3, lines 26 – 37 and 59 - 61) and evaluating segment times in which a shaft of the engine passes through the angular segments (See Col. 3, lines 21 – 25 and 39 – 54).

Regarding claim 6, in Dietz et al, an angular expansion of the angle segments is considered and the angle expansion of the angle segments is dependent upon an operating parameter of the engine (See Cols. 3 and 4, lines 47 – 54 and 61 – 67).
